Fisherman & Boatowner FIELD TEST

VVVVrrrrrrrrrrooooooommmnnnnnnnnnn

SUZUKI's 250hp V-6 POWERHOUSE

This new Suzi is the most powerful 4-stroke outboard ever put into full scale production. Amazingly, it is also one of the lightest outboards in this class (2-stroke or 4-stroke), weighing in at just 268 kg in the ultra long, 30" leg configuration!

The grunt does not come from some high fallutin', highly stressed piece of 'band-aid engineering', either. The raw power comes from a massive, brand new, dedicated 3.614 litre marine engine, complete with state of the art fuel injection, valve timing and free-flowing head design. According to the engineers, it not only meets ALL the new emission controls (including CARB 2008) already, the engine is only just at the bottom of the development ladder . .
